

My website planning

I'll start by defining my vision and goals for the website, aiming to create an engaging and functional platform that showcases my unique furniture designs. Drawing from my YouTube tutorials and hard coding skills, my goal is to build a website that is visually appealing and easy to navigate. I'll begin by sketching out the structure of my website, which will include key sections such as the Homepage, Product Pages, About me, Blog, Contact me. Each section will serve a specific purpose: the Homepage will feature a hero image or video of my best pieces, a brief brand introduction, and links to product categories; Product Pages will provide detailed information and high-quality images; the About Me page will share my brand story and passion for furniture design; the Blog will feature articles on interior design tips and furniture care to enhance SEO; and the Contact me page will facilitate easy communication.

Moving to the technical implementation phase, I'll write clean, efficient code for each section using HTML5, CSS3, and JavaScript that I have learned through Youtube tutorials and W3school for interactive elements, ensuring the site is mobile-responsive and fast-loading. I'll use GitHub for version control to manage my code effectively. Testing will be crucial, where I'll check for bugs, broken links, and display issues across different devices and browsers, and gather feedback for refinements. By following these steps, I'll create a visually appealing, functional website that effectively showcases my furniture designs. Once the structure is in place, I'll refine the visual elements to ensure a cohesive and appealing aesthetic. I'll use consistent fonts, colors, and design elements to create a unified look that reflects my brand's identity. I'll also integrate interactive features such as image zoom functions and room visualizers to enhance the user experience.

To further enhance the user experience, I'll implement fast loading times and ensure the site is accessible on all devices. Throughout the development process, I'll continuously gather feedback and make necessary adjustments to ensure the website meets the needs and expectations of its users. This approach will help me create a website that not only looks great but also functions seamlessly. With these planning I have made, I hope that my website turns out not only great but functional and responsive.
