Challenge #1

The website Wondering is all about the wonder of the universe featuring the beauty of celestial being. Applying the knowledge and abilities I've gained from W3Schools to produce a fully functional, user-friendly website is the aim of my website project. I now have a thorough understanding of web development principles, including HTML, CSS, and more complex subjects like accessibility and responsive design, thanks to W3Schools. This document describes my goals for the website and the procedures I want to take to guarantee that it complies with current web standards.

This project offers me a great chance to hone the web programming abilities I acquired from W3Schools. I intend to produce a top-notch website that is both useful and aesthetically beautiful by concentrating on important elements like responsive design, accessibility, performance optimization, and user experience.
