

MY GOALS IN CREATING A WEBSITE

FOR DRESSES AND SKIRTS

To create an eye-catching, fashionable website where customers may peruse a variety of dresses and skirts. A collection of pictures, descriptions, and sections for different types (such as formal, informal, and seasonal attire) will be included on the website.

WEBSITE PLAN

1. Define the Structure

Home Page: Brief welcome message or tagline, featured images, and links to different sections (e.g., Casual Dresses, Formal Skirts, Summer Collection).

Categories Page: Separate pages for each type of dress or skirt, with descriptions.

Product Details: Optional page for individual items, including more images, detailed descriptions, and possibly a "Buy Now" or "More Info" button.

Contact Page: Simple form for visitors to reach out with questions, featuring fields for name, email, and message.

About Page: Information about the purpose of the website, who it's for, and some fashion tips if desired.

2. Choose a Color Scheme and Style

Colors: Light and airy colors (e.g., pastel pinks, creams, or neutral tones) to reflect the theme of fashion and femininity.

Typography: Choose stylish, readable fonts for headers and simpler fonts for body text.

Layout: Use a clean, grid-based layout for the gallery, and plenty of white space to keep it uncluttered.

3. Set Up Your Project Files

HTML Files: index.html, about.html, contact.html, categories.html (with subpages for each style if desired).

CSS File: styles.css for all the styling of the site.

W3.css: I might also use this in styling the site.

4. Development Steps

HTML Structure:

Create the basic HTML structure for each page.

Add sections with div tags for headers, content, images, and footers.

CSS Styling:

Style the main layout and navigation bar.

Use Flexbox or Grid for the image galleries on the category pages.

Add hover effects on images for a more interactive feel.

Style buttons and links to match the theme.

5. Populate Content

Images: Gather high-quality images of dresses and skirts. Use free resources or your own photography.

Descriptions: Write brief, engaging descriptions for each item or style category.

Links and Buttons: Add links to each category on the homepage, and make sure buttons (like "Contact Us") are functional.

6. Optimize for Mobile

Use responsive CSS to ensure the website looks good on different devices.

Set media queries to adjust the layout, image sizes, and font sizes for smaller screens.

7. Test and Refine

Test on different browsers and devices.

Adjust any layout or styling issues.

Check for broken links and spelling errors.

The Timeline that I might follow in creating the website:

WEEK	TASK
1	Defining/Start visualizing the structure, set-up project files of the site.
2	Start building the HTML pages.
3	Style with CSS or w3.css.
4	Test and optimizing for mobile users.
5	Adjustments and polishing.
6	Additional week for testing and polishing the website.

Following this plan will guide me through creating a polished website about dresses and skirts, perfect for showcasing my design and some of my coding skills!
