1 – BS INFORMATION SYSTEM – A

CHALLENGE #1

MY GOALS AND PLANS IN MY WEBSITE BASED ON MY LEARNING IN W3SCHOOL

- The primary goal of this website is to apply the skills and knowledge acquired through learning on W3Schools to create a fully functional, responsive, and user-friendly website. This website will serve as a personal project showcasing web development skills using HTML, CSS, JavaScript, and other web technologies covered in W3Schools.

GOALS

Responsive Design - I'm going to create a website that adapts to different screen sizes and devices (desktop, tablet, and mobile) by using responsive web design techniques, including CSS Flexbox and Grid.

Interactive Features - Incorporate JavaScript to add interactivity to the website, such as form validation, dynamic content updates, and user input handling.

Modern Web Technologies - Use modern web technologies such as HTML5, CSS3, and JavaScript (ES6+) to build a clean and semantic structure for the website.

Cross-browser Compatibility - Ensure that the website functions well across different browsers like Chrome, Firefox, and Edge.

ABOUT MY WEBSITE

In ancient Greek mythology, the **12 Olympian gods** are the principal deities who resided on **Mount Olympus**, the highest peak in Greece. These gods were considered the most powerful and important in the Greek pantheon, each ruling over different aspects of the world, nature, and human experience. They played central roles in Greek myths, shaping both the natural world and human history through their actions and interactions with mortals.
