## CHALLENGE #1

General Idea

I will make a website that will showcase my skills. The primary goal of the SOLO.C website is to showcase my work as a photographer and graphic designer, while also providing information about my background, services, and how to contact me. I aim to create a user friendly platform where visitors can explore my portfolio and easily get in touch with me for potential projects.

Structure of my site

My website inspiration will be netflix with a tint of spotify's design layout. I want a clean, modern and professional look since I want it to be a professional looking site. The website will be structured with a clear navigation system and clean layout to ensure a smooth user experience.

My site will include (working buttons)

Home Page – This will feature an introductory section with an image, a brief description of my work, and a welcoming message.
About Page – This section will describe my background, skills, and experience in multimedia creatives, including graphic design, photography, and journalism.
Portfolio Page (Works) – This page will showcase my best work, including my photography and graphic design projects, presented in a visually appealing manner.
Contact Page – A form will be provided where users can easily reach out to me for inquiries or project discussions.

And also integrating some of the features of w3schools, especially some of the templates and mixing them together, also for assistance and ideas for my web design to make it more appealing to the audience.
