Goals:

1. **Create an Accessible Platform for Real Estate**

   - The primary goal of this website is to provide users with an easy-to-navigate platform where they can browse and learn about real estate properties for sale.

2. **Enhance User Experience**

   - Ensure the website is visually appealing, organized, and user-friendly, even for those with limited technical skills.

3. **Showcase Key Information**

   - Highlight property categories, an "About Me" section, and a blog to engage users and provide valuable insights about the real estate market.

Website Structure

   - The website will have five main categories to organize the available real estate properties. Each category will focus on a specific type of property (e.g., houses, apartments, commercial spaces, etc.).

   - A dedicated "About Me" section will introduce the creator, provide context for the site, and build trust with potential buyers.

   - A blog section will feature articles related to real estate trends, tips for home buyers, and other engaging topics.

Expected Outcome

By the end of this project, the website will serve as a simple yet effective platform for users to explore and engage with real estate content. It will demonstrate practical knowledge of HTML and CSS while achieving the project's goals.
